

ABC.Chain - Traceability Of The World's Green Rare Species

Vision: To create a global shared ecosystem for tracing and identifying rare green species.

ABC Chain, known for short as ABC, is issued by Singapore ABCCHAIN Foundation. It is developed for the traceability chain of green rare species in the world based on ETH, to create a trusted and shared distributed quality detection network on the basis of blockchain decentralized distributed ledger, smart contract, consensus mechanism and other technologies. The purpose is to solve the industry development pain points in the global green rare species industry. ABC.Chain was mainly applied in the agarwood industry in the early stage to solve the industry pain points of the proliferation of counterfeit goods that agarwood industry faces and promote the healthy development of the agarwood industry. In the future, more green rare species will be gradually incorporated into the traceable ecology of the ABC.Chain green rare species blockchain, which will be built into a traceable public chain for global green rare species. At the same time, ABC.Chain pioneered the bottom-up issue of blockchain digital assets in combination with physical delivery. For

every 100 ABCs, one gram(valued at RMB 1,000) can be exchanged in the global ABC.Chain ecology. ABC.Chain not only has the value of landing application to promote the healthy development of traditional industries, but the bottom-up issue also brings a very large investment value-added attribute to the supporters.

ABC.Chain（全球绿色珍稀物种溯源）

ABC Chain 简称：ABC。是由新加坡 ABCCHAIN 基金会发行，基于 ETH 开发的应用于全球绿色珍稀物种的溯源链，打造基于区块链去中心化分布式账本、智能合约、共识机制等技术打造可信任、共享的分布式质量检测网络。是为了解决全球绿色珍稀物种行业存在的行业发展痛点，ABC.Chain 前期主要在沉香行业落地应用，以解决沉香行业面临的假货泛滥的行业痛点，推动沉香行业的健康发展。未来将逐步把更多绿色珍稀的物种纳入 ABC.Chain 绿色珍稀物种区块链溯源生态中，将打造成为一款应用于全球绿色珍稀物种的溯源公链。同时 ABC.Chain 开创了区块链数字资产结合实物交割的托底发行先河。每持有 100 个 ABC 即可在全球 ABC.Chain 生态里兑换一克（价值人民币 1000 元）的种植棋楠沉香。ABC.Chain 既具备了落地应用价值，推动传统行业的健康发展；同时托底发行也给支持者带来非常大的投资增值属性。
